Hi-Tech promethazine hydrochloride and codeine phosphate syrup

Product Description

Hi-Tech Promethazine Hydrochloride and Codeine Phosphate Syrup is a prescription medication that combines two powerful ingredients: promethazine hydrochloride, an antihistamine, and codeine phosphate, an opioid cough suppressant. This syrup is primarily used to relieve coughing and alleviate symptoms associated with allergies or the common cold.

Key Features:

- **Promethazine Hydrochloride:** Reduces allergy symptoms, and motion sickness, and enhances the sedative effects of codeine.
- **Codeine Phosphate:** Provides effective cough suppression and relief from discomfort.
- **Pleasant Taste:** Formulated for easy consumption with a palatable flavor.
- **Multi-Symptom Relief:** Addresses coughing, runny nose, and sneezing due to allergies or colds.

Usage: Administered as directed by a healthcare provider, typically taken in measured doses.

Warning: May cause drowsiness; avoid operating heavy machinery or driving after use. Use with caution in patients with a history of substance abuse.

ch promethazine Syrup Online is used as a pain reliever in cases of mild to moderate pain, and to help relieve coughing when over-the-counter medications aren't strong enough. Codeine belongs to the opiate class

of drugs, and it alters the brain and nervous system's response to pain. This psychoactive effect can cause numbing effects in the body and suppress the body's cough reflex, but it can also cause a euphoric high that people chase when they take codeine to get high.

Ingredients of cough syrup when mixed with flavoring ingredients make their transition to lean. when they are. Ingredients often include sugary soft drinks and candy. Thus "dirty Sprite" or "dirty soda" could be an alternative name for Lean. Sugary flavoring helps make the sticky-sweet taste of cough syrup more palatable. We have most of our products in stock; so always available. We control the brands we sell and ensure their quality, most of our customers obtain accurate results every time. What are codeine and promethazine?

Codeine is an opiate painkiller which can induce a pleasurable state in those who consume it. Codeine can be thought of as the "star of the show" it provides the pleasurable effects often sought out by the user. Often paired with codeine, and an important part of traditional "lean" is promethazine. Promethazine is an antihistamine which potentiates the effects of codeine. However, hi-tech promethazine has its own personality and affects the user as much as the codeine. If you have ever taken an OTC antihistamine like Benadryl then you will be familiar with the effects of promethazine. Similar to other antihistamines, users of promethazine appear sleepy.
